## Profile Summary

I'm a self-taught front-end developer. I have some experience in developing with React and have completed several projects using this framework, which I undertook personally to enhance my skills. You can find these projects showcased in the portfolio section. Additionally, I hold around four degrees from training courses offered by esteemed universities and institutions such as John Hopkins, Duke, and Michigan through Coursera. I am eager to generate new value by embracing new challenges and continually enhancing my skills day by day.

## Skills

- |              |            |
|--------------|------------|
| HTML - CSS   | Javascript |
| React        | Bootstrap  |
| TailwindCSS  | Sass       |
| Git & GitHub | Figma      |
| SEO          | API        |

## Work Experience

### Content Creator and Video Editor

Linom Startup  
Tehran, Iran  
September 2020 - February 2021

#### Tasks and Achievements

- Adobe Photoshop, Adobe Premiere Pro

## Projects

---

### React Chat App - Portogram

For: Personal

August 2023

In my React Chat project, I implemented React Router Dom Version 6 for efficient routing. For the backend server and authentication, I integrated Firebase. Within the project, I utilized React Context for state management, implemented routes and redirections, employed functional-based components, and implemented user sign-in and sign-out methods. Unfortunately for some reason (chat engine) for this project have limited rules for free account and after 2 weeks limits our chat app project.

### React Form

For: Personal

August 2023

This is a React form built upon functional components. In this project, I employed regex for form field validation and integrated the React Toast package for status notifications. Additionally, I utilized React Router Version 6 for efficient routing, implemented seamless redirections, and implemented robust error handling.

### React Shopping Cart

For: Personal

August 2023

In my React shopping cart project, I leveraged APIs and retrieved data using Axios. I implemented React Router Version 6 for seamless routing, including route creation and redirection. Additionally, I employed the Context for efficient state management. Notably, I designed a dedicated product details component for each individual product to enhance user experience and functionality.

### React Crypto

For: Personal

August 2023

In this project, I utilized Axios to fetch cryptocurrency data via an API and displayed it effectively using functional components. Additionally, I implemented real-time search functionality to enhance the user experience.

You can also find more projects in my GitHub account.
